

Navigating the Future of Project Management: Industry and Academia Insights

KTH, June 14

During this workshop, we will focus on the present and future challenges of project management. In a half-day session, we will engage in interactive discussions centered on future trends and challenges in project management, with a strong industry focus. As the world prioritizes sustainability, project management will face new and complex challenges. Our guest speakers from the industry will share their insights on these challenges from their perspective, while academics will elaborate on the latest research trends. For instance, as project organizations become more geographically dispersed, there will be a need for effective virtual collaboration tools and strategies.
